ABOUT

Specialized company for the production and installation of: PVC and AL windows and doors, garage doors, blinds, balcony and yard fences, gates and gate motors, winter gardens and aluminum structures. In addition to all of the above, we manufacture and install mosquito nets, curtains, sunroofs, doorways, and so forth.

The wide range of products we offer, many years of experience in the industry, dedicated and thorough work to get the finished product are just some of the elements that are our motivation in fulfilling the main goal, which is the satisfaction of our customers. That's why our greatest pride is our satisfied customers all over Bosnia and Herzegovina, Croatia, Austria, Germany, Luxembourg and the Netherlands.

We have been on the market since 2017 and meet the most demanding requirements of our customers by producing finished products from first-class materials from well-known European and world manufacturers, while meeting all the elements of traceability standards in the production of PVC and AL windows and doors and other products.

PVC WINDOWS

G-U EURO-JET

A reliable hardware that offers basic safety with cylindrical seals.

G-U UNI-JET

A first-class hardware with fungal sealing elements and the ability to achieve a higher class of security.

Available window handles:

G-U SOPRANO

G-U DIRIGENT

VICTORY

HOPPE ATLANTA SECUSTIK

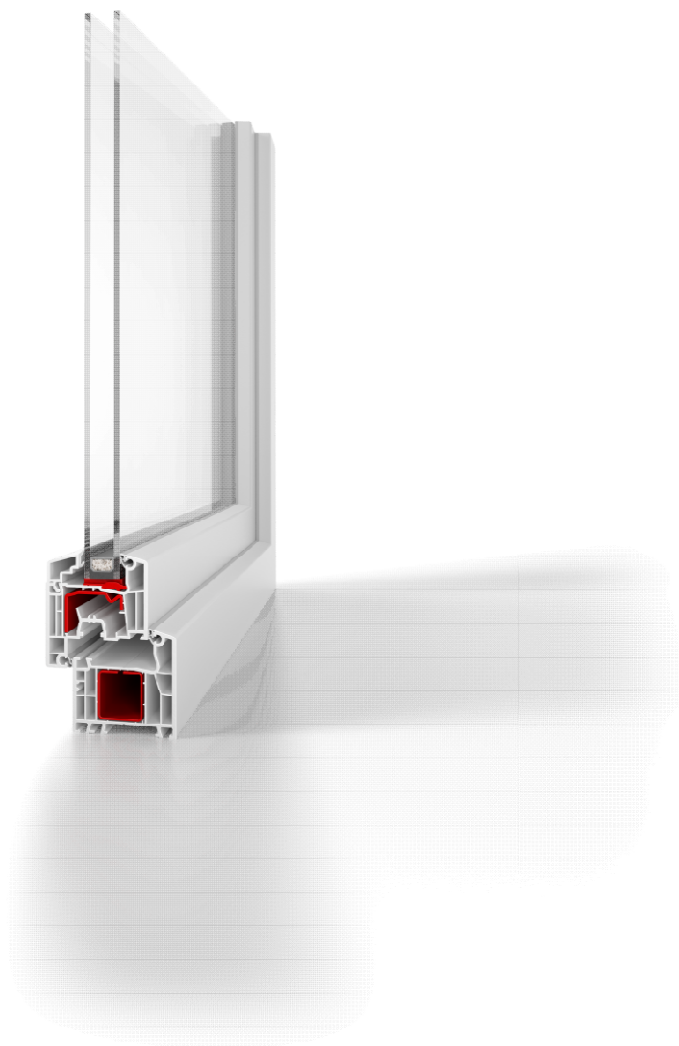

A double layer thermal insulation glazing with an argon gas filling in the interspace, and a Low-e coating on one layer of the package offers good thermal characteristics, with $U_g = 1.1 \text{ W/m}^2\text{K}$ most commonly achieved.

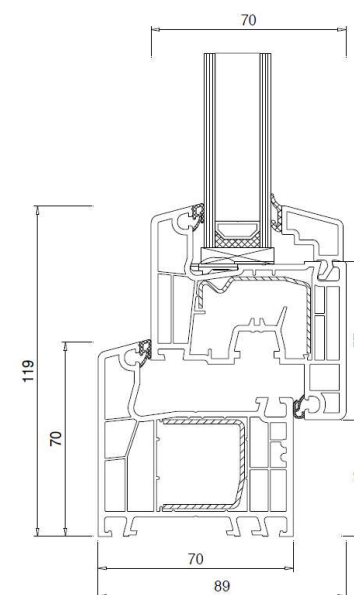

The three-layer thermal insulation glazing with two argon gas fillings and two layers of Low-e coating in the package offers superior thermal insulation properties making it suitable for new construction and where high thermal and sound insulation is required. Usually $U_g = 0.7 \text{ W/m}^2\text{K}$ is achieved, with the possibility of making up to $U_g = 0.5 \text{ W/m}^2\text{K}$.

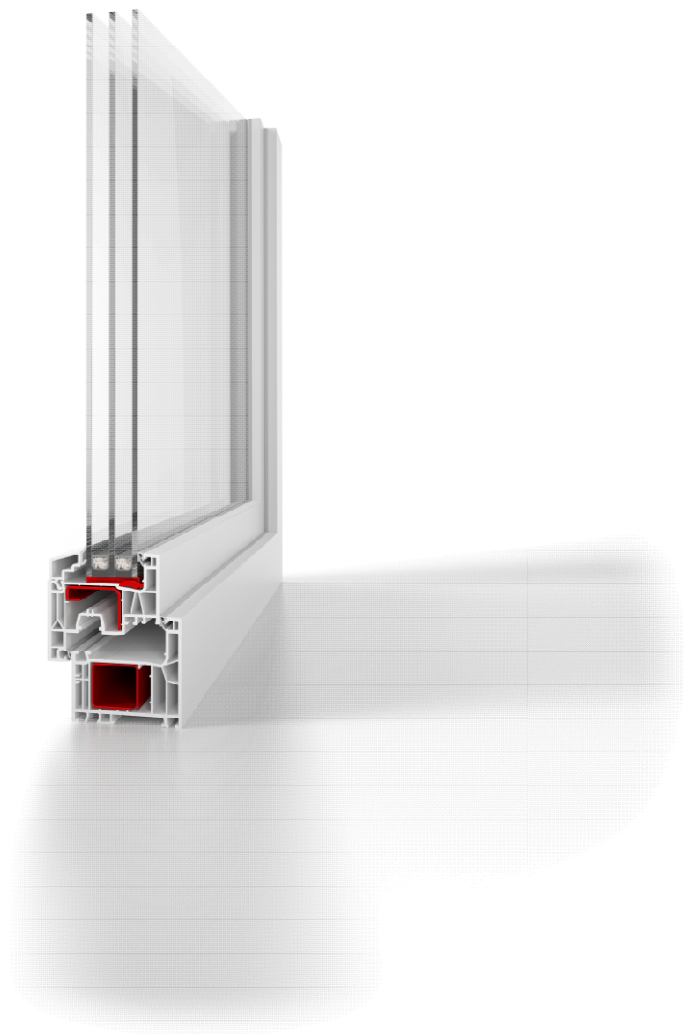

Thermal insulating glazing is usually made with standard aluminium spacers in the interspace, but the same are also made in variants with so-called thermix spacers in black or gray at the request of the customer.

The thermal insulation glazing package may also include glass panes, the so-called RAL-coloured panes, available in widths of 18 or 25 mm.

WINTER GARDEN

Winter gardens as a product have found their application in modern residential construction, where efforts are made to make a living space with the maximum amount of daylight, which complements the living space.

Winter gardens are products that, in addition to a large amount of natural light, offer you superior thermal insulation of the interior, and high-quality technical solutions allow various types of openings on the very sides of the winter garden, whether they are sliding systems or conventional tilt and turn opening systems.

In our offer you will find a winter garden in a variant of the dedicated FEAL ZV system designed for winter gardens, whereby the aluminum profiles themselves are coated according to the RAL color wishes of the customer.

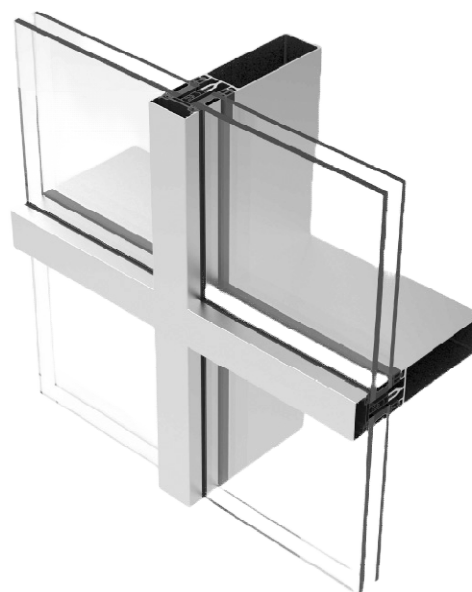

GLASS FACADE

Glass facades are used in glazing large areas, especially when it comes to commercial buildings, where due to the high static load on the surfaces themselves, a high static resistance of both the structure and the glazing is required.

With a glass facade, you get a durable product that looks aesthetically pleasing, and you increase the functionality of the glass facade by incorporating various tilt and turn or sliding systems into the structure itself.

In our offer you can find EMERUS E50K continuous facades that offer outstanding static properties, a beautiful aesthetic appearance and high energy efficiency, whereby the U_w coefficient can be achieved up to $0.9 \text{ W/m}^2\text{K}$.

GARAGE DOORS

SECTIONAL GARAGE DOORS

Garage doors have become an indispensable segment of modern home furnishings and ancillary facilities. In our offer you can find first-class sectional doors with 40 mm thick thermal panels, of exceptional static properties that allow the production in large dimensions.

Our garage doors are equipped with state-of-the-art SOMFY electric motors for remote control, with a battery-operated emergency power supply.

Our doors are available in the following colors: white (RAL9016), gray (RAL9006), anthracite (RAL7016), brown (RAL8014), and gold oak decoration.

somfy

OTHER PRODUCTS FOR WINDOWS

The roller shutters are for protection from sunlight during the day and from unwanted glances at night. In our offer you can find all types of shutters made of the highest quality materials ALUPROF and EXTE.

When it comes to the actual construction of a shutter box, three types are distinguished: exterior visible box, exterior invisible box, and built-in shutter box.

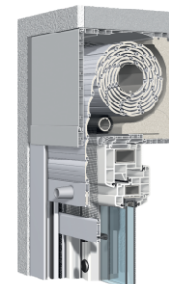

Exterior visible box

Exterior invisible box

Built-in box

When it comes to roller shutter drive, roller shutters are made with manual and electric motor drive. In our offer you can find first-class electric motors from two manufacturers: SOMFY and HEICKO GmbH. Electric shutter motors come in different designs depending on the purpose and load of the motor itself.

ALUPROF
ALUMINIUM SYSTEMS

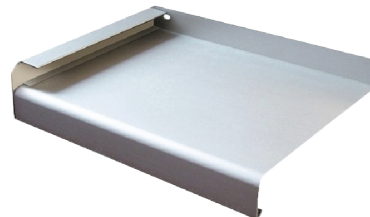

exte

When it comes to window sills as a final product in our assortment you can find interior PVC, and exterior AL sills.

The interior PVC sills are available in five different decors: white, imitation marble, anthracite, dark walnut and golden oak.

External AL benches are available in colors according to the RAL colors, but we highlight the standard colors: white (RAL9016), anthracite (RAL7016), brown (RAL8014), and an eloxed gray (EV1). AL benches also come in two variants of end caps, the aluminum end cap, and the PVC end cap.

Mosquito nets has become a necessary item, whether when buying new windows or by buying it as a separate product.

When it comes to the mosquito nets themselves, we distinguish four different types of nets performance:

- fixed net with a visible frame 17x25 mm
- fixed net with an invisible frame
- rollernets
- sliding mosquito net

Grills are used for protection from sunlight, especially in areas with strong winds (coastal and coastal areas), where grills with movable slats, simple construction, are made.

FENCES AND GATES

Yard, balcony or stair fences, various dimensions and types of construction, all of this can be found in our product range, where we highlight a few basic types of fences:

- AL grill motive (horizontal fillings with sealed pipes)
- AL ELEGANT fence (vertical filling dimensions 50x10 mm with spacing)
- Flat-fill fencing (flat-fill pipes with or without spacing)
- AL high gloss fence
- A glass fence

When it comes to gates, we distinguish three basic types of gates:

- wing gate
- slide with lower guide
- a sliding self-supporting (floating) gate

In addition, the gates are made in manual and electric drive versions. First-class SOMFY motors are used, with a high degree of reliability, durability and high load capacity.

All the joints on our gate arms are welded, which guarantees the durability and quality of the final product.
